/note="Vector: pH885-8al, A yeast genomic DNA library
without 2 micron or mitochondrial DNA was prepared in
pH886-8al; genomic DNA was size-fractionated (DNA of
roughly 2-3 kb in length) prior to cloning. This library
was subsequently mutagenized with a mTn-3xHA/lacz
minitransposon containing lacz, URA3, and tet resistance.

/note="Vector: pHSS6-Sal; A yeast genomic DNA library
without 2 micron or mitochondrial DNA was prepared in
pHSS6-Sal; genomic DNA was size-fractionated (DNA of
roughly 2-3 kb in length) prior to cloning. This library
was subsequently mutagenized with a mTn-3xHA/lacz
minitransposon containing lacz, URA3, and tet resistance.

Large-Scale Analysis of the Yeast Genome by Transposon Tagging and Gene Distription
of rice world wide. It is a filamentous ascomycete with a haploid genome (n=7) of approximately 40 Mbp. Rice blast is an important model fungal pathogen for studying numerous aspects of the fungal-host interaction. In order to facilitate genome wide analysis, a BAC library containing 9216 clones with an average insert size of 130 kbp was constructed. This library represents greater than 25% genome coverage. High density colony filters are available upon request."

/note="Vector: pB4CWICH; Site 1: HindIII; Site 2: HindIII;
/Rice blast is one of the most devestating fungal diseases
of rice world wide. It is a filamentous ascomycete with
a haploid genome (n=7) of approximately 40 Mbp. Rice
blast is an important model fungal pathogen for studying
numerous aspects of the fungal-host interaction.
order to facilitate genome wide analysis, a BAC library
containing 9216 clones with an average insert size of 130
/kbp was constructed. This library represents greater
than 25% genome coverage. High density colony filters
are available upon request. " 3 others

/lab host="E coil DH:08"
/clone_lib=cucil Rice Blast BAC Library"
/clone_lib=cucil Rice Blast BAC Library
/clone world wide. It is a filamentous ascomycete with
a haploid genome (n=7) of approximately 40 Mbp. Rice
blast is an important model fungal pathogen for studying
numerous aspects of the fungal-host interaction. In
order to facilitate genome with an average insert size of 130
/kbp was constructed. This library represents greater
than 25% genome coverage. High density colony filters
are available upon request."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AQ447230

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          /done lib="CUGI Kice Black BAC Library" / clone lib="CUGI Kice Black BAC Library" / note="Wector: pBACWICH; Site_1: HindIII; Site_2: HindIII; Rice Black is one of the most devestating fungal diseases of rice world wide. It is a filamentous ascomycete with a haploid genome (n=7) of approximately 40 Mbp. Rice blast is an important model fungal pathogen for studying numerous aspects of the fungal lost interaction. In order to facilitate genome wide analysis, a BAC library containing 9216 clones with an average insert size of 130 kbp was constructed. This library represents greater than 25X genome coverage. High density colony filters are available upon request." I others

Rice blast is one of the most devestating fungal diseases of rice world wide. It is a filamentous assomycete with a haploid genome (n=7) of approximately 40 Mbp. Rice blast is an important model fungal pathogen for studying numerous aspects of the fungal-host interaction. In order to facilitate genome wide analysis, a BAC library containing 9216 clones with an average insert size of the kbp was constructed. This library represents greater than 25X genome coverage. High density colony filters are available upon request. 12 others

Rice blast is one of the most devestating fungal diseases

of rice world wide. It is a filamentous ascomycete with
a haploid genome (n=7) of approximately 40 Mbp. Rice
blast is an important model fungal pathogen for studying
numerous aspects of the fungal-host interaction. In
order to facilitate genome wide analysis, a BAC library
containing 9216 clones with an average insert size of 130
kbp was constructed. This library represents greater
than 25X genome coverage. High density colony filters
are available upon request."
